Comment. The correctness of the statement cannot be rated for lack of information on the location of the field. It is possible that the area north of the suburb of Ludwikowo was partially cleared of woods and improved as an airfield. The area between the Brda hiver, the banks of which were covered with settlements, and the edge of the woods ceasures lx2.5 km. It has not been determined whether there is a connection between the previously reported possible transfer of the folish ground attack regiment from the airfield southwest of Dromberg and this new airfield.

• From the vague description of the planes observed over Bromberg airfield, the aircraft types cannot be determined
